EBV	A brief explanation
Eight Week Weight	The breeding potential for lamb growth rates from birth to 8 weeks of age.
Scan Weight	Choosing animals with high figures for this trait will increase mature size.
Muscle depth	Choosing animals with high muscle depth EBVs will increase lamb muscularity and hence the lean meat content of the carcase.
Fat Depth	Negative values indicate animals with lower fat content which will produce leaner carcases or which can be taken to higher weights without becoming over-fat.
Gigot	Breeding value highlighting animals with superior breeding potential for gigot shape (EBV only produced for breeds involved in CT scanning).
Index	Highlights superior breeding stock for a specific breeding objective.

Ewes

MR & MRS A J WRAYFORD (WOTTON)

We have decided it is time to have a major reduction of our flock, only retaining a few older ewes to keep an interest. The sale includes the complete crop of 2016 shearing ewes. We purchased our first Charollais ewe in 1989 and have been a closed flock, except for rams, since 1992. In 2013 all the females in the flock were scrapie genotyped and now the whole flock is from group one stock. These ewes were shorn mid May and will be sold untrimmed, so buyers will be able to see their real shape and good back ends. This is a chance for new or established breeders to buy some of our best breeding stock.

MR A L BROWN & MRS G C BECKLEY (ABBASCOMBE)

It is with great reluctance that we find the need for a major reduction of our flock, we shall keep just a few ewes to stay in the society. We have been a closed flock since we started in 2006 with 5 ewes from the Wards Hill Flock. We have had many prize-winners and champions during this time and have always used rams that are ARR/ARR. All the shearling ewes and ram lambs recently tested were ARR/ARR
